### Auditors' Report

To the Shareholders of National Bank of Egypt  
(S.A.E)

#### Report on the separate financial statements

We have audited the accompanying separate financial statements of National Bank of Egypt (S.A.E) which comprise the separate statement of financial position as at 30 June 2020, and the separate statements of income (profit / loss), the separate statement of comprehensive income, separate statement of changes in equity and separate statement of cash flows for the financial year then ended and a summary of significant accounting policies and other explanatory notes.

#### Management's responsibility for the separate financial statements

These separate financial statements are the responsibility of bank's management. Management is responsible for the preparation and fair presentation of these separate financial statements in accordance with Central Bank of Egypt's rules pertaining to the preparation and presentation of the financial statements issued on 16 December 2008 followed by the amendment instruction issued in 26 February 2019 and in light of the prevailing Egyptian laws. Management responsibility includes designing, implementing and maintaining internal controls relevant to the preparation and fair presentation of separate financial statements that are free from material misstatement whether due to fraud or error. Management responsibility also includes selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

#### Auditor's Responsibility

Our responsibility is to express an opinion on these separate financial statements based on our audit. We concluded our audit in accordance with the Egyptian Standards on Auditing and in the light of the prevailing Egyptian laws. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the separate financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal controls relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a reasonable base for our audit opinion on the separate financial statements.

#### Opinion

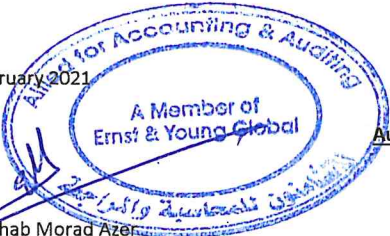

In our opinion, the separate financial statements referred to above present fairly in all material respects, the separate financial position of National Bank of Egypt (S.A.E) as at 30 June 2020 and its financial performance and its cash flows for the year then ended in accordance with the Central Bank of Egypt's rules pertaining to the preparation and presentation of the financial statements issued on 16 December 2008, followed by the amendment instruction issued in 26 February 2019 and the Egyptian laws and regulations relating to the preparation of these separate financial statements.

#### Report on other legal and regulatory requirements

The bank maintains proper books of account, which include all that is required by law and by the statutes of the bank. The separate financial statements are in agreement thereto. The financial information included in the board of directors' report which is prepared in accordance with law No. 159 of 1981 and its executive regulations is in agreement with the books of the bank insofar as such information is recorded therein.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**1. General**

National Bank of Egypt (S.A.E) was established as a commercial bank on 25/6/1898 and operates in conformity with Law No. 88 for 2003 in Arab Republic of Egypt and head office is located in Cairo.

National Bank of Egypt (S.A.E) provides retail, corporate and investment banking services in Arab Republic of Egypt through its head office in Cairo and ( 517 ) branches, domestic financial units, representative offices in Johannesburg (South Africa), Dubai (United Arab of Emirates) and Addis Ababa (Ethiopia) and through branches in New York (United States), Shanghai (China). The bank has 21702 employees at June 30, 2020.

**2. Summary of significant accounting policies**
**2.1- Basis of preparation of the separate financial statements**

These separate financial statements have been prepared in accordance with the instructions of the Central Bank of Egypt (CBE) rules approved by its Board of Directors on December 16, 2008; and as per IFRS 9 "Financial Instruments" in accordance with the instructions of the Central Bank of Egypt (CBE) dated February 26, 2019.

The financial statements at June 30, 2019 have been prepared in accordance with the instructions of the Central Bank of Egypt (CBE) rules approved by its Board of Directors on December 16, 2008 and starting from July 01, 2019, the financial statements have been prepared according to Central Bank of Egypt (CBE) instructions dated February 26, 2019 to prepare financial statements according to IFRS 9 "Financial Instruments".

Accordingly, management amended the accounting policies to comply with the adoption of mentioned instructions, the following disclosure describes the changes in accounting policies:

The Bank initially applied IFRS 9 "Financial Instruments" issued on July 2014 starting from July 01, 2019 and as a trial implementation throughout 2018 ,however the actual implementation will be starting from July 01,2019. The standard requirement substantially differ from the previously applied standard in the classification , measurement and disclosers of some financial assets and liabilities.

**Classification of financial assets and financial liabilities:**

At initial recognition, financial assets have been classified and measured according to amortized cost, fair value through other comprehensive income (FVTOCI) and fair value through profit or loss (FVTPL).

- The financial assets have been classified according to how they are managed (the entity's business model) and their contractual cash flow characteristics.
- The financial assets are measured at amortized cost if it is not measured at fair value through the profit or loss and if the following two conditions met:
  - a) The management's intention is to maintain the asset in the business model to collect contractual cash flows and;
  - b) The contractual conditions of the financial assets will build cash flows in certain dates which are limited only on payment of principal and interest (SPPI).
- The Bank may choose without recourse to measure equity investments which are not classified as a trading investment at fair value through other comprehensive income at initial recognition. This choice will be made per each investment.
- All other financial assets will be classified at fair value through profit or loss

In addition to that, the bank may choose without recourse a financial asset to be measured at amortized cost or fair value through other comprehensive income to be measured at fair value through the profit or loss in the initial recognition, and in such a case that this reclassification will lead to prevent an accounting mismatch.

**2.1.1-Business model assessment:**

The Bank makes an assessment of the objective of a business model in which a financial asset is held at a portfolio level because this best reflects the way the business is managed and information is provided to management. The information considered includes:

- a) The stated policies and objectives for the portfolio and the operation of those policies in practice, especially to know whether these management policies concentrate to gain the contractual interest or reconcile financial assets period with financial liabilities period which finance these assets or target cash flow from selling the assets;
- b) How the performance of the portfolio is evaluated and reported to the Bank's management;
- c) The risks that affect the performance of the business model and the financial assets held within that business model and how those risks are managed;

The frequency, volume and timing of sales in prior periods, the reasons for such sales and its expectations about future sales activity. Meanwhile the bank did not rely only on information related to sales activity separately, but taking into consideration overall assessment on how achieving the goal that was announced by the bank to manage financial assets and how to achieve cash flow.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**Assessment of whether contractual cash flows are solely payments of principal and interest**

For the purposes of this assessment, 'principal' is defined as the fair value of the financial asset at initial recognition. 'Interest' is defined as consideration for the time value of money and for the credit risk associated with the principal amount outstanding during a particular period of time and for other basic lending risks and costs (e.g. liquidity risk and administrative costs), as well as profit margin.

In assessing whether the contractual cash flows are solely payments of principal and interest, the bank considers the contractual terms of the instrument. This includes assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cash flows such that it would not meet this condition.

**2.1.2 Impairment of financial assets**

According to Central Bank of Egypt (CBE) instructions dated February 26, 2019 to implement IFRS 9 is to replace the "impairment loss model recognized" according to previous instructions dated December 16, 2008 with expected credit loss (ECL).

Expected credit loss is applied on all financial assets in addition to some financial guarantees and loan commitments.

According to IFRS 9, a credit loss will be recognized much earlier than the current impairment loss model stated in the Central Bank of Egypt (CBE) instructions dated December 16, 2008.

The Bank apply three stages to measure expected credit loss on financial assets that are recognized at amortized cost and debt instruments that are recognized at fair value through other comprehensive income. The financial assets can transfer between three stages according to changes in credit quality since initial recognition.

**Stage 12 months Expected Credit Loss:**

Stage 1 includes financial assets on initial recognition and that do not have a significant increase in credit risk since the initial recognition or that have low credit risk. For these assets, an expected credit loss is recognized over 12 months, and the interest is calculated on the gross carrying amount of the asset (without deducting ECL provision), ECL for 12 months is the expected credit loss resulted from expected default within 12 months from the reporting date.

**Stage 2: Lifetime Expected Credit Loss - not credit impaired:**

Stage 2 includes financial assets that have had a significant increase in credit risk since initial recognition but that do not have objective evidence of impairment. For these assets, lifetime expected credit loss is recognized, but interest is still calculated on the gross carrying amount of the asset. Lifetime expected credit losses are the expected credit losses that result from all possible default events over the expected life of the financial instrument.

**Stage 3: Lifetime Expected Credit Loss - credit impaired**

Stage 3 includes financial assets that have objective evidence of impairment at the reporting date. For these assets, the lifetime expected credit loss are recognized, and the interest is marginalized in this stage.

According to CBE regulation issued on February 26, 2019, IFRS 9 had been applied starting from July 01, 2019, the bank had recognized the implementation impact according to the said instructions, special reserve (credit), general banking reserve and IFRS 9 risk reserve are merged together under general risk reserve as follows:-

<u>Description</u>	<u>General risk Reserve</u>
Opening Balance as of June 30, 2019	-
General banking risk Reserve	3,398
Special Reserve-Credit	296
IFRS 9 Risk Reserve	6,926
<b>Opening Balance as of July, 2019</b>	<b>10,620</b>

**2.2- Accounting for Investments in subsidiaries and associates**

Investments in subsidiaries and associates are presented in the attached separate financial statements based on the cost method, which represents the bank's direct share of ownership, and not based on the investee's companies net operating and net assets value.

**2.2.1 - Investments in subsidiaries**

Subsidiaries are entities (including Special Purposes Entities / SPEs) which the bank exercises direct or indirect control over its financial and operating policies in order to get benefits from its activities and usually have an ownership share of more than half of its voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered in assessing why either the bank has the control over its investees.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**2.2.2 Investments in associates**

Associates are entities over which the bank exercises significant influence directly or indirectly, but without exercising control or joint control, where the bank holds 20% to 50% of voting rights in the associate.

The purchase method is used to account for the bank's purchases of subsidiaries and associates when they are initially recognized; the acquisition date is the date on which the acquirer obtains control or significant influence of acquire "subsidiary or associate". According to the purchase method, the investments in subsidiaries and associates are initially recognized at cost (which may be incorporated goodwill). The acquisition cost represents the fair value of the consideration given in addition to the other acquisition related costs.

In business combination achieved in stages, and business combination achieved through more than one transaction, is then dealing with every transaction of such transactions that separately on the basis of the acquisition consideration and fair value information at the date of each transition until the date where the control is achieved.

The investments in subsidiaries and associates are subsequently accounted for using the cost method on the separate financial statements. According to the cost method; investments are recognized at acquisition cost less any impairment losses in value, if any. Dividends are recognized as revenue in the separate income statement when declared and the bank has a right to collect them.

**2.3- Foreign currency translation**
**2.3.1 Functional and presentation currency**

The separate financial statements of the bank are presented in the Egyptian pound which is the bank's functional and presentation currency.

**2.3.2 Transactions and balances in foreign currencies**

The Bank maintains its accounting records in Egyptian pounds. Transactions in foreign currencies during the period are translated into the Egyptian pounds using the exchange rates prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are re-translated using the exchange rate at end of reporting period. Foreign exchange gains and losses resulting from settlement and translation of such transactions and balances are recognized in the income statement and reported under the following items:-

- Net trading income from held for trading assets and liabilities.
- Other operating revenues (expenses) from the remaining assets and liabilities.
- Investments in equity instrument recognized at fair value through other comprehensive income in equity.
- Changes in the fair value of investments in debt instruments; which represent monetary financial instruments, denominated in foreign currencies and classified as fair value through other comprehensive income assets are analyzed into differences resulting from changes in the amortized cost of the instrument, differences resulting from changes in the applicable exchange rates and differences resulting from changes in the fair value of the instrument. Differences resulting from changes in the amortized cost are recognized and reported in the income statement in "Interest on loans and similar income" whereas differences resulting from changes in foreign exchange rates are recognized and reported in "Other operating revenues (expenses)". The remaining differences resulting from changes in fair value are recognized in equity and accumulated in the "Fair value reserve" in Other Comprehensive Income.
- Valuation differences arising on the measurement of non-monetary items at fair value include gains or losses resulting from changes in foreign currency exchange rates used to translate those items. Total fair value changes arising on the measurement of equity instruments classified as at fair value through the profit or loss are recognized in the income statement, whereas total fair value changes arising on the measurement of equity instruments classified as fair value through other comprehensive income are recognized directly in equity in the "Fair value revaluation reserve" in Other Comprehensive Income.

**2.4- Financial assets**
**2.4.1 Financial Policies applied until June 30, 2019**

The Bank classifies its financial assets into the following categories: Financial assets classified as at fair value through the profits or loss, loans and receivables, held to maturity financial assets, and available-for-sale financial assets. The classification depends on the nature and purpose of the financial assets and is determined by management at the time of initial recognition.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**2.4.1.1 Trading financial assets**

This category includes financial assets held for trading purpose and financial derivatives (not for hedging purpose). A financial instrument is classified as an instrument held for trading if it is primarily acquired for the purpose of the sale in the short term or if it represents a part of a portfolio of specific financial instruments that are managed together and there is evidence of recent actual transactions that resulted in short-term profit taking, or it is a derivative that is not designated and effective as a hedging instrument.

**2.4.1.2 Loans and receivables**

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, other than the following:

- Assets which the bank intends to sell immediately or in the short term. In which case, they are classified as assets held for trading or assets classified at inception at fair value through profit or loss;
- Assets classified as available-for-sale at initial recognition;
- Assets for which the bank will not be able to substantially recover the value of its initial investment for reasons other than credit worthiness deterioration.

**2.4.1.3- Held to maturity financial assets**

Held to maturity investments are non-derivative financial assets that carry fixed or determinable payments and where the bank has the intention and the ability to hold to maturity. Any sale of a significant amount, not close to the date of its maturity, would result in the reclassification of all held to maturity investments as available for sale except cases of necessity.

**2.4.1.4- Available-for-sale financial assets**

Available-for-sale financial assets are those non-derivative financial assets intended to be held for an indefinite period of time, which may be sold in response to needs for liquidity or changes in interest rates, exchange rates or equity prices.

The following is applied in respect of all financial assets:

- Regular-way purchases and sales of financial assets are recognized at trading date, at which the bank is committed to purchase or sale asset, for the assets held for trading, investments held to maturity and available-for-sale investments.
- All financial assets, other than those classified as at fair value through profit or loss, are initially recognized at fair value plus transaction costs. Financial assets classified as at fair value through profit or loss are initially recognized at fair value only. Transaction costs associated with those assets are recognized in the income statement under net trading income.
- The Bank derecognizes a financial asset only when the contractual rights to the cash flows from the financial asset expire or when the bank transfers the financial asset and all the risks and rewards associated with the ownership of the asset to other party. Financial liabilities are derecognized when they are extinguished; that is when the obligation is discharged, cancelled or expired.
- Available-for-sale and financial assets designated at fair value through profit or loss are subsequently measured at fair value. Loans and receivables and held to maturity investments are subsequently measured at amortized cost.
- Profits /losses arising from changes in the fair value of the financial assets classified as at fair value through profit or loss are recognized in the income statement in the period in which they arise. Gains and losses arising from changes in the fair value of available-for-sale financial assets shall be recognized directly in equity, until the financial asset is derecognized or impaired, at which time, the cumulative gain or loss previously recognized in equity shall be recognized in the income statement. Interest income calculated using the amortized cost method, and gains and losses arise from the foreign currency on monetary financial assets classified as available-for-sale financial investments shall be recognized in the income statement. Dividends resulted from the equity instruments classified as available-for-sale shall be recognized in the income statement when the bank has the right to receive payments .
- The fair value of quoted investments in an active market is based on current bid prices. If there is no active market for a financial asset nor a current quoted prices, the bank measures the fair value using one of the market valuation techniques' including using recently similar transactions , discounted cash flow model or options pricing models, if the bank can not determine the fair value of the equity instruments classified as available-for-sale then it is measured at cost less of any impairment losses.

## National Bank of Egypt

## Notes to the separate financial statements for the year ended 30 Jun 2020

All figures are in EGP Millions

**2.4.2 Financial Policies applied starting from July 01, 2019:**

The Bank classifies its financial assets into the following categories Financial assets classified at amortized cost, fair value through other comprehensive income (FVTOCI) and fair value through profit or loss (FVTPL). The classification generally based on the business model, in which the financial assets are managed, and its contractual cash flows.

**2.4.2.1 - Financial assets classified at amortized cost**

The financial asset is held within a business model, which objective is to collect contractual cash flows.

The objective of that model is to collect a contractual cash flows which include both principal and interest. The sale is an exceptional event for the purpose of this model and under the terms of the standard represented in the following:-

- A credit deterioration for the issuer of financial instrument.
- Lowest sales in terms of rotation and value.
- A clear and reliable documentation process for the justification of each sale transaction and its conformity with the requirements of the standard.

**2.4.2.2- Financial assets classified as fair value through other comprehensive income**

- The financial asset is held within a business model, which objective is to collect contractual cash flows and sale.
- The objective of the model is achieved by both collecting contractual cash flows and sale.
- Comparing to the business model which objective is to held contractual cash flows, sales are higher in turnover and value.

**2.4.2.3- Financial assets classified as fair value through profit/ loss**

- The financial asset is held within the other business models, including trading, asset management under fair value, maximizing contractual cash flows through selling transactions.
- The objective of the business model is neither to held contractual cash flows nor to held contractual cash flows and sale.
- Collecting contractual cash flows is an incidental event for the objective of the model.

**The characteristics of the business model are as follows:**

- Structuring a set of activities designed to extract specific outputs.
- Represents a complete framework for a specific activity (inputs - activities - outputs).
- One business model can includes sub-business models.

**2.5-Offsetting between financial instruments**

A financial assets and a financial liabilities should only be offset when an entity has a legally enforceable right to set off and intends to settle on a net basis, or to realize the asset and settle the liability simultaneously.

**2.6- Financial derivatives and hedge accounting**

Derivatives are initially recognized at fair value on the commitment date and are subsequently measured at fair value. Fair values are determined based on quoted market prices in active markets, including recent market transactions, or valuation techniques, including discounted cash flow models and options pricing models, as appropriate. Derivatives are recognized as an assets when their fair value is a positive, or as a liabilities when their fair value is a negative.

Embedded derivatives, such as the conversion option in a convertible bonds, are treated as separate derivatives when their economic characteristics and risks are not closely related to those of the host contract, provided that the host contract is not classified at fair value through profit or loss. These embedded derivatives are measured at fair value, changes in fair value are recognized in the income statement under "Net trading income", embodied derivative are not separated from the hybrid contract if the bank decided to classify the whole hybrid contract at fair value through profit or loss.

The recognition treatment in profit or loss, arising from changes in derivatives fair value, depends on whether the derivative designated as a hedging instrument and the nature of the hedged item. The bank then designates certain derivatives as follows:

- Fair value hedge, hedge of the exposure to changes in fair value of a recognized asset or liability, or an unrecognized firm commitment.
- Cash flow hedge is attributable to a particular risk associated with all, or a component of a recognized asset or a liability or a highly probable forecast transaction.

Hedge accounting is used for derivatives designated in a hedging relationship when the following criteria are met, at the inception of the hedging relationship, the bank documents the relationship between the hedging instrument and the hedged item, along with its risk management objectives and its strategy for undertaking various hedge transactions. Furthermore, at the inception of the hedge and on an ongoing basis, the bank documents whether the hedging instrument is effective in offsetting changes in fair values or cash flows of the hedged item.

## National Bank of Egypt

## Notes to the separate financial statements for the year ended 30 Jun 2020

All figures are in EGP Millions

**2.6.1- Fair value hedge**

Changes in the fair value of derivatives that are designated and qualify as fair value hedge are recognized immediately in the profit or loss, together with any changes in the fair value of the hedged asset or liability that are attributable to the hedged risk. The effective portion of changes in the fair value of the forward exchange contracts and the changes in the fair value of the hedged item are recognized in "Net trading income". Additionally, any ineffective portion is recognized in "Net trading income".

**2.6.2- Cash flow hedge**

The effective portion of changes in the fair value of derivatives designated and qualify for cash flow hedge is recognized in equity while changes in fair value relating to the ineffective portion is recognized immediately in the income statement under "Net trading income".

Amounts accumulated in equity are transferred to income statement (profit/loss) in the relevant periods when the hedged item affects the income statement. The effective portion of changes in fair value of interest rate swaps and options are reported in "Net trading income". When a hedged item matured or sold, or if the hedge is no longer qualify for hedge accounting requirements, gains or losses that have been previously accumulated in equity remain in equity and are only recognized in profit or loss when the forecast transaction ultimately occurs. If the forecast transaction is no longer expected to occur, any related cumulative gain or loss on the hedging instrument that has been recognized in equity shall be reclassified immediately to the income statement (profit/loss).

**2.6.3- Non qualifying derivatives for hedge accounting**

Where a derivative instrument does not qualify for hedge accounting, changes in fair value of that derivative are recognized in the income statement under "Net trading income"

Net income from the changes in the financial instruments designated at inception with fair value through profit or loss are recognized in the income statement under gains or losses arising from changes in fair value of derivatives that are managed in conjunction with financial assets or financial liabilities, designated upon initial recognition at fair value through profit or loss.

**2.7- Interest income and expense**

"Interest income on loans and similar income" or "Interest expense on deposits and similar expense" are recognized in the income statement under "Net interest income" using the effective interest rate method for all financial instruments.

The effective interest rate is a method of calculating The amortized cost of a debt instrument whether a financial asset or a financial liability and of allocating its interest income or interest expense over The relevant period. The effective interest rate is The rate that exactly discounts estimated future cash payments or receipts through The expected life of The financial debt instrument or, when appropriate, a shorter period to The net carrying amount of The financial asset or financial liability on initial recognition. when calculating The effective interest rate, The bank estimates The future cash flows, considering all contractual terms of The financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to The contract that are an integral part of The effective interest rate, transaction costs and all other premiums or discounts.

Interest income on loans is recognized on an accrual basis except for the interest income on non-performing loans, which ceases to be recognized as revenue when the recovery of interest or principle is in doubt.

Interest income on non-performing or impaired (Stage 3) loans and receivables ceases to be recognized in profit or loss and is rather recorded off-balance sheet in statistical records. Interest income on these loans is recognized as revenue on a cash basis as follows:

- For retail loans, personal loans, small and medium business loans, real estate loans for personal housing and small loans for businesses, when interest income is collected and after recovery of all arrears.
- For corporate loans, interest income is recognized on a cash-basis after the bank collects 25% of the rescheduled installments, provided these installments continue to be paid regularly for at least one year. If a loan continues to be performing thereafter, interest accrued on the principal then outstanding starts to be recognized as revenues (interest on rescheduling performing loans) . except for Interest that is marginalized prior to the date when the loan becomes performing, which is not recognized in the profit or loss provided that the total balance of loan, prior to that date, is paid in full.

**National Bank of Egypt**

**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**2.8 Fees and commission income**

Fees charged for servicing a loan or facility that is measured at amortized cost, are recognized as revenue when the service is provided. Fees and commissions on non-performing or impaired loans or advances cease to be recognized as income and are rather recorded off balance sheet. These are recognized as revenue on a cash basis.

Commitment fees and related direct costs for loans where draw down is probable are deferred, and is regarded as a compensation for the ongoing involvement with the acquisition of the financial instrument, thereafter recognized as an adjustment to the loan effective interest rate. If the commitment expires without the bank granting the loan, the fees are recognized as revenue on the maturity date.

Loan syndication fees received by the bank are recognized as revenue when the syndication has been completed, if only the bank arranges the loan and retains no part of the loan package for itself (or retains a part at the same effective interest rate for comparable risk as other participants).

Commission and fee arising from negotiating or participating in the negotiation of third party transaction, such as the arrangement of the acquisition of shares or other financial instrument and the purchase or sale of properties, are recognized in the income statement (profit/loss) upon completion of the underlying transaction.

Other management advisory and service fees are recognized based on a relative time –basis throughout the service performing term. Financial planning and custody services fees that are provided on long term are recognized over the year in which the service is provided.

**2.9- Dividend Income**

Dividends are recognized in the income statement for the bank's equity investments when the right to collect it is declared

**2.10- Repurchase agreement and resale agreement.**

Financial instruments sold under repurchase agreements are not derecognized from the statement of financial position, cash proceeds are shown in liability side in the statement of financial position.

**2.11 Impairment of financial assets**

**2.11.1 Financial Policies applied until June 30, 2019:**

The bank reviews all its financial assets, except those classified at fair value through profit or loss, to assess whether an indication exists that these assets have an impairment loss as described below:

**2.11.1.1 Financial assets carried at amortized cost**

At the end of each reporting period, the bank assesses whether there is objective evidence that any financial asset or group of financial assets has been impaired as a result of one or more events occurring since they were initially recognized (a "loss event") and whether that loss event has impacted the future cash flows of the financial asset or group of financial assets that can be reliably estimated.

**The Bank considers the following indicators to determine the existence of substantive evidence for impairment losses:**

- Significant financial difficulty of the issuer or obligor.
- A breach of contract, such as a default or delinquency in interest or principal payments.
- It is becoming probable that the borrower will enter bankruptcy or financial re-organization.
- Deterioration of the competitive position of the borrower.
- For economic or legal reasons related to the financial difficulties of the borrower, the bank grants benefits and concessions may not be granted in normal circumstances.
- Impairment in the value of collaterals.
- Deterioration of creditworthiness.

An objective evidence of impairment loss for a group of financial assets is an observable data indicating a measurable decrease in the estimated future cash flows from this group of financial asset since its initial recognition although such decrease cannot be measurable on each asset separately.

The Bank first estimates whether an objective evidence of impairment exists individually for financial assets that are individually significant, and individually or collectively for financial assets that are not individually significant, taking into the consideration the following:

- If the bank determines that no objective evidence that an impairment loss has been incurred on a financial asset considered individually, whether significant or not, then the bank includes that financial asset in a group of financial assets with a similar credit risk characteristics and assess collectively the whole group for impairment according to the historical default ratios.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

- An individually impairment test is made for a financial asset if there is an objective evidence of impairment for this financial asset. If the impairment occurred, then this asset will be separated from group of financial assets that are collectively evaluated for impairment, If the result of the previous assessment did not recognize impairment loss, then this asset will be added to the group of financial assets.
- If there is objective evidence that an impairment loss on loans and receivables or held to maturity investments carried at amortized cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset shall be reduced through use of an allowance account. The amount of the loss shall be recognized in profit or loss
- If a loan, receivable or held to maturity investment has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate(s) determined under the contract at the date on which an objective evidence for impairment of the asset has been identified as a practical expedient, the bank may measure impairment of a financial asset carried at amortized cost on the basis of an instrument's fair value using an observable market price. The calculation of the present value of the estimated future cash flows of a collateralized financial asset reflects the cash flows that may result from foreclosure less costs for obtaining and selling the collateral, whether or not foreclosure is probable.

For the purpose of a collective assessment of impairment, financial assets are grouped on the basis of similar credit risk characteristics that are indicative of the debtors' ability to pay all amounts due according to the contractual terms.

When assessing the impairment loss for a group of financial assets on the basis of the historical loss rates, future cash flows in the group are estimated on the basis of the contractual cash flows of the bank's assets and the historical loss experience for assets with credit risk characteristics similar to those in the group. Historical loss experience is adjusted based on current observable data to reflect the effects of current conditions that did not affect the period on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not exist currently. The Bank ensures that estimates of changes in future cash flows reflect and are directionally consistent with changes in related observable data from period to period. The methodology and assumptions used for estimating future cash flows are reviewed regularly by the bank to reduce any differences between loss estimates and actual loss experience.

### **2.11.1.2-Available-for-sale financial assets**

On each reporting date, the bank estimates whether there is an objective evidence that a financial asset or group of financial assets classified as available-for-sale or held to maturity is impaired. For equity instrument classified as available for sale investment, impairment is recognized when the instrument's fair value decline below its acquisition cost and this decline considered as a significant and a prolonged. The decline in value is considered significant for the equity instruments, if it reaches 10% of the financial instrument's book value, and it is considered as a prolonged decline, if it continues for more than 9 months. When the mentioned evidence is available, the accumulated loss in equity is carried forward to income statement. The impairment of equity instrument recognized in income statement is not reversed if any fair value increase occurred in a subsequent period, but if any increase in the fair value of debt instrument classified as available for sale was objectively related to an event subsequent to the impairment recognition in income statement, the impairment is reversed through profit and loss.

### **2.11.2- Financial Policies applied starting from July 01, 2019:**

The Bank reviews all its financial assets except for financial assets that are measured at fair value through profit or loss to assess the extent of impairment as described below.

Financial assets are classified at three stages at each reporting date:

- **Stage 1:** Financial assets that have not experienced a substantial increase in credit risk since the date of initial recognition, and the expected credit loss is calculated for 12 months.
- **Stage 2:** Financial assets that have experienced a substantial increase in credit risk since the initial recognition or the date on which the investments are made, and the expected credit loss is calculated over the life of the asset.
- **Stage 3:** Impairment of financial assets whose expected credit loss is to be recognized over the life of the asset on the basis of the difference between the carrying amount of the instrument and the present value of expected future cash flows

### **Credit losses and impairment losses of financial instruments' value are measured as follows:**

- The lowest risk financial instrument is initially recognized at stage one, credit risks are monitored by the Bank's credit risk management on a regular basis.
- If there is a significant increase in the credit risk since initial recognition, the financial instrument will be transferred to stage two, as the financial instrument is not considered impaired at this stage.

**National Bank of Egypt**

**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

- If there are an impairment indicators for the financial instrument, it will be transferred to the stage three.
- The financial assets developed or acquired by the Bank which include a higher credit risk rate than the bank's financial assets with the lowest credit risk rate are initially recognized at stage two directly, therefore the expected credit losses are measured over the life time expected credit loss.

**2.11.2.1-Significant increase in credit risk**

The Bank considers that the financial instrument has a significant increase in the credit risk when one or more of the quantitative and qualitative criteria, as well as the factors relating to default, have been met. Such as the deterioration in creditworthiness of the debtors, or there is a significant negative changes in the debtors behavior i.e.. installment default...etc.

**Transition back between stages (1,2,3):**

**Transition backward from stage two to stage one :**

The financial asset is not backward from stage2 to the stage1, unless all the quantitative and qualitative aspects of stage1 are met, and a full payment of all arrears and interest with up to date payment for the period of three months.

**Transition backward from stage three to stage two :**

The financial asset is not backward from stage3 to the stage 2 including reschedule transactions unless all the following conditions have been met:

- All the quantitative and qualitative aspects of stage2 are met.
- Payment of 25% from accrued outstanding balance including accrued suspended/marginalized interest.
- Up to date payment of interest and principle for the period of 12 months at least.

**2.12- Property investments**

Property investments represents lands and buildings owned by the bank in order to obtain rental revenue or capital gains. Consequently, these investments do not include properties used by the bank for its operations and activities or the assets reverted to the bank as settlement of debts. The accounting treatment used for fixed asset is the same applied for property investment.

**2.13- Intangible Assets**

**2.13.1-Computer programs**

The expenses related to upgrading or maintenance of computer programs, are to be recognized as expenses in income statement, when incurred. The expenses directly related to a specific software program and subjected to the bank's control and expected to produce economic benefits exceeding its cost for more than one year, are to be recognized as an intangible asset. The direct expenses include cost of software upgrading staff and a suitable portion of respective overhead expenses. The expenses leading to an increase or expansion of computer software performance beyond their original specifications are recognized as an upgrading cost and are added to the original software cost.

The cost of computer software recognized as an asset shall be amortized over the expected useful life, but not exceeding three years.

**2.13.2-Other Intangible Assets**

Other intangible assets are intangible assets other than goodwill and computer software (for instance: trademarks, license, and benefits of rental agreement). Other intangible assets are recognized at acquisition cost and amortized over its estimated useful life using straight-line method or according to expected economic benefits. Other intangible assets with indefinite useful life are not subjected to amortization; however, it will be tested for impairment annually and charged to income statement (profit / loss) if any.

**2.14- Fixed Assets**

Lands and buildings comprise mainly in head office, branches and offices. All fixed assets are reported at historical cost less depreciation and impairment losses. The historical cost includes the expenditures directly related to the acquisition of fixed assets items. Subsequent costs are included in the asset's carrying value or are recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be measured reliably. Maintenance and repair expenses are charged to other operating expenses during the year in which they are incurred. Leasehold improvements are charged as an expense on income statement. Land is not depreciated. Depreciation of other assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:-

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**2.14- Fixed Assets (Continued)**

Type of Asset	Depreciation period
Buildings and constructions	20 years
Furniture	4 years
Fittings and fixtures	10 years
Vehicles	5 years
Integrated automated systems (computers)	4 years
Locked doors and rooms	10 years

**2.15- Impairment of Non-Financial Assets**

Assets with indefinite useful life other than goodwill are not amortized however, it will be tested for impairment annually. Depreciable assets shall be reviewed for impairment, whenever there are events or changes in circumstances indicating that the book value may not be recoverable.

An impairment loss is recognized and the asset's value is reduced for the amount by which the asset's carrying amount exceeding its recoverable amount. The recoverable amount is the higher of an asset's net selling value or the value in use. For impairment test purposes, Assets are attributed to the lowest level of cash generating unit(s) and the recognized impairment of non-financial assets is reviewed to determine reversal of impairment to income statement on each balance sheet date.

**2.16-Cash and Cash Equivalents**

For the purposes of the cash flows statement, cash and cash equivalents comprise balances with maturity of three months from the date of acquisition, balances with Central banks over the obligatory reserve outline, due from banks and treasury bills and other governmental notes.

**2.17- Other provisions**

Provisions for obligations, other than those for credit risk or employee benefits, due within more than 12 months from the date of separate financial statements are recognized based on the present value of the best estimate of the consideration required to settle the present obligation at the reporting date. An appropriate pretax discount rate that reflects the time value of money is used to calculate the present value of such provisions.

For obligations due within less than twelve months from the date of separate financial statements, provisions are calculated based on undiscounted expected cash outflows unless the time value of money is material, in which case provisions are measured at present value.

When a provision is wholly or partially no longer required, it is reversed through the profit or loss under "Other Operating Income (Expenses)" line item.

**2.18- Financial Guarantees Contracts**

The financial guarantees contracts are contracts issued by the bank as a guarantee for loans or overdrafts granted by other entities to the bank's customers, which obligate the bank to pay certain compensation to the beneficiary for the loss incurred due to a default of the debtor on maturity date aligning with the debt instrument conditions. These financial guarantees are granted to the banks, corporations, financial institutions and other entities on behalf of the bank's customers.

It is initially recognized in the financial statement at fair value which reflects the guarantee fees on the date of granting. Subsequently, the Bank's obligation shall be measured by the initially recognized value less guarantee fees amortization, which is reported in the income statement using the higher of a straight-line method over the guarantee useful life or the best estimate of the required payment settlement of any financial obligation resulted from the financial guarantee on the balance sheet date. These estimates are mainly based on management experience with similar transactions and historical losses. Any increase in the obligations resulted from the financial guarantee, is recognized in income statement under "other operating income (expenses)".

**2.19- Employee's Benefits**

Employee's benefits include all financial and nonfinancial benefits provided by the bank to its employees' for their services.

**2.19.1-Short-term Employee's Benefits**

Short-term employees' benefits include salaries and wages, social insurance subscription fees, paid annual leave, bonus (if accrued within 12 months from the financial period ends) and non-financial benefits (as healthcare, housing utilities, transportation, free and subsided services provided to current employees).

Short-term employees' benefits are charged to the income statement as an expense for the period in which the service was provided to the bank's employees who are entitled to receive these benefits. ☐

**National Bank of Egypt****Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**2.19.2-Early termination-service's Benefits**

Early termination-service's benefits include accrued benefits for the employees who were early terminated aligning with the approved regulations by board of directors'. The bank recognizes the cost of such benefits at the effective date of early termination according to the optional early termination scheme in which the expenses are charged to the income statement for the period in which these benefits are accrued.

**2.19.3-Pension Benefits-specific subscription scheme****2.19.3.1-Social insurance**

Pension benefits represent the bank's contribution of the social insurance paid to the social insurance authority on behalf of its employees according to the Law of the Social Insurance No. (79) for the year of 1975 and its amendments. As the bank pays its contribution in the social insurance authority for each period. This contribution is charged to the income statement in salaries and wages reported in the general and administrative expenses caption for the period in which the bank's employees provide their services. The bank's obligation regarding the settlement of pension benefits is considered as a specific subscription scheme therefore no additional obligation regarding employee's pension benefits is charged on the bank except its contribution of social insurance that is accrued for the authority by the bank on behalf of its employees'.

**2.19.3.2-Special Insurance Fund**

The bank pays the fund's share (the special insurance fund) from the determined annual variable wages according to the fund's articles of association which enclose on paying the annual member's subscription fees which is equal to six months of the employees shares. The fund provides the determined one-installment benefit in cases of (Retirement in 60's age, Death, Early termination and Resignation) in addition to post-retirement monthly pension for ten years varied according to the employee job ranking. The bank's obligation of payment these benefits is considered as a specific subscription scheme.

**2.19.3.3-Other Post-Service's Benefits-Healthcare**

The bank provides healthcare benefits for pensioners after service ends. The healthcare commitment is considered as a specific subscription scheme. The recognized liability in the balance sheet regarding the pensioner's healthcare system is measured at the present value of the determined liabilities on balance sheet's date after deducting the fair value of the related assets and subtracting (adding) unrealized actuarial reconciliations of profits (losses) as well as the cost of the additional benefits regarding prior service terms.

An independent actuary who applies the Projected Unit Credit Method calculates the liability of the annually determined benefits system (future cash flows expected to be paid). The present value of the determined benefits system liability is measured through deducting these expected future cash flows to be paid by applying the rate of return of high quality corporate bonds or the rate of return of government bonds in the same currency to be used in payment of benefits and which have almost the same maturity period as the pension benefit liabilities regarding these benefits.

Calculated gains (losses) resulting from changes and adjustments in actuarial estimates and assumptions are to be deducted from (the losses added to) the income statement if they do not exceed 10% of the determined benefit system's assets value or 10% of the determined benefit system's liability whichever is higher. In case gains (losses) rise above-mentioned percentage then the increase shall be deducted (added) in the income statement. The costs of previously mentioned-service are directly recognized in the income statement within administrative expenses caption unless the amendments of the retirements' regulations are conditional to the remaining of the employee in services for a specific period of time.

**2.19.3.4-Other Post-Employment Benefits**

The bank provides benefits for pensioners after service ends. Generally, the accrual of these benefits are conditional to, the remaining of the employees in service till the retirement age and the completion of a minimum period of service. The expected costs of these benefits are to be accrued over the employment period of time by adopting an accounting method similar to the method adopted in the specific subscription scheme.

**2.20- Income Tax**

The income tax on the profit and loss for the year includes both the current and deferred taxes. Income tax is recognized in the income statement except for income taxes relating to equity items that are recognized directly in the equity.

The income tax is recognized based on the net taxable income, using the applicable tax rate on the balance sheet date, in addition to prior years' tax adjustments.

Deferred taxes arising from the temporary time differences between the book value of assets and liabilities allied with the accounting principle and the value allied with tax principles are recognized according to the expected manner to realize or settle the value of assets and liabilities using the applicable tax rate on the date of balance sheet.

## National Bank of Egypt

## Notes to the separate financial statements for the year ended 30 Jun 2020

All figures are in EGP Millions

**2.20- Income Tax (Continued)**

The bank's deferred tax assets are recognized when there is a weighted probability of realizing a taxable net profit in the future whereby this asset can be utilized. The deferred tax assets are reduced by the estimated amount of the unrealized taxable profit in the following years. However, in case of increasing in the estimated taxable profit, the deferred tax assets will increase to the extent of previous reduction.

The Bank is subject to income taxes in several tax districts regarding overseas branches that require using a significant estimate to determine the total provision of the income taxes. There are some accounts and operations that are hard to comprehensively determine the final tax assessment.

The Bank records obligations derived from the expected results of tax inspection based on estimates of the probability of determining additional taxes. When there is a variance between the final taxes' result and the amounts previously recorded, these variances will affect the income tax and the deferred tax provision for the year in which the variance is identified.

**2.21-Borrowing**

The obtained loans by the bank are recognized initially at fair value net of transaction costs incurred. Loan is subsequently reported at amortized cost. Any difference between the net proceeds and the settlement value is recognized in the income statement over the borrowing' period using the effective interest rate method.

**2.22- Significant accounting estimates and assumptions**

The Bank uses an estimates and assumptions that affect the disclosed amounts of assets and liabilities in the following year. These estimates and assumptions are evaluated based on the historical experience and other factors including the expectations of future events that are considered reasonable under the circumstances and available information.

When scheduling future cash flows, the management uses estimates based on previous experience of asset losses with credit risk characteristics in the presence of objective evidence indicating impairment similar to that in the portfolio. The method and assumptions used to estimate both the amount and timing of future cash flows are reviewed regularly to reduce Any differences between the estimated loss and the actual loss based on experience

**2.22.1- Fair value of derivatives**

The fair values of derivative financial instruments not quoted in active markets, are determined using valuation methods. When these methods (such as models) are used to measure the fair values, they are tested and reviewed periodically by qualified personnel who are independent of the method's drafters. All models are verified before being used and after being tested to ensure that their results reflect actual data and prices that can be compared to the market to the extent that is considered practical. Only reliable data are used in these models; however, areas such as credit risks corresponding to the bank, counterparties, volatility or correlations require management to use estimates. Changes in estimates of these factors may affect the fair value of the financial instrument reported at the date of the reporting date.

**3-The Implementation impact of IFRS 9 on the opening balances**

In accordance with the Central Bank of Egypt regulations issued on 26 February 2019 , regarding the implementation of IFRS (9), opening balances have been restated by the effect of the calculated Expected Credit Losses (ECL). This amount has been subtracted from General Risk Reserve by EGP 6.8 Billion. Accordingly, the financial assets and liabilities comparative figures have been amended and did not restated to conform with the current year financial statements presentation.

**4-Financial Risk Management:**

The bank, as a result of the exercised activities, is exposed to various financial risks. Since the basis of financial activity is to accept risks; some risks or risks grouped together are analyzed, evaluated and managed altogether. The bank intends to achieve a convenient balance between the risk and the return and to reduce the probable adverse effects on the bank's financial performance. The most important type of risk is credit risk, market risk, liquidity risk and other operating risks. The market risk comprises of foreign currency exchange rates risk, rate of return risk and other pricing risks.

The bank's risk management policies are designed to identify, analyze these risks, set limits to the risk and control them through reliable methods and up-to-date information systems. The bank regularly reviews its risk management policies and systems and amend them to reflect the changes in market, products and services and emerging best practice.

Those risks are managed by risk department in the light of policies approved by Board of Directors. The risk department determines, evaluates and hedge the financial risks, in close collaboration with the bank's various operating units, and the Board of Directors provides written principles for the overall risk management, in addition to a written policies covering specific risk areas, like credit risk, foreign currency exchange rate risk, rate of return risk, and the using of financial derivative and non-derivative instruments. Moreover, the risk department is independently responsible for a periodical review of risk management and control environment.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**4.1-Credit risk**

The bank is exposed to a credit risk, which is the risk arising from the default of one party. The credit risk is considered to be the most significant risk for the bank, therefore the risk department manages its risk exposure carefully. The credit risk is essentially represented in the lending activities which result in loans, advances and investing activities that leads to the arising of a debt instrument included in the bank's financial assets.

The credit risk is also found in off balance sheet financial instruments, such as loan commitment. The managing and monitoring process on credit risk is centralized at credit risk management team at credit risk department that reports to Board of Directors and Head units on a regular basis.

**4.1.1- Credit risk measurement**
**Loans and advances to banks and customers**

In measuring credit risk for loans and advances to customers and banks, the bank reflects three components:

- Probability of default by the customer or a third party on their contractual obligations.
- The current position and the future weighted evolution from which the bank derive the exposure at default.
- Loss given default.

The daily activities of the bank's business involve measurement of credit risk which reflects the expected loss (the expected loss model) required by Basel committee on banking supervision, the operating measures may contradict with the impairment charge in accordance with the previous standards, which are based on the losses incurred on reporting date (the incurred losses model) rather than the expected losses, as will be explained later.

The Bank evaluates the probability of default for each customer using internal evaluation techniques in order to separately categorize the eligibility of different types customers. These techniques are updated by considering the statistical analysis and the personal judgment of the credit officer to reach a convenient eligibility rating.

The bank's customers are segmented into four eligibility rating. The bank's eligibility rating scale, which is shown as below, assesses the probability of default for each eligibility rating category, which essentially means that credit positions migrate between the mentioned categories as the assessment of their probability of default changes. The assessment techniques are reviewed and updated whenever it's necessary. Further, the bank periodically assesses the performance of the eligibility rating techniques and its predictability of the default cases.

**The Bank's internal rating categories according to eligibility rating scale:**

Rating	Grade description
1	Performing loans
2	Regular watching
3	Watch list
4	Non performing loans

The position exposed to default is based on the expected outstanding amounts when the default occurs; for example, as for a loan, the position is the nominal value while for commitments, the bank enlists the actual withdrawing amounts in addition to the expected amounts to be withdrawn until the date of default, if any.

Loss given default or loss severity represents the bank's expectations of the extent of loss when the debt is claimed in case of default. Expressed by the percentage of loss to the debt; this typically varies by the category of the debtor, the claim's priority and the availability of collaterals or other credit hedge items.

**4.1.2-Risk Limit Control and Mitigation Policies**

The Bank manages limits and controls the credit concentrations at the borrowers' level, groups of borrower's level, industries level and countries level. The Bank arranges the acceptable credit risk level by placing limits on the extent of risk accepted in relation to single borrower, or groups of borrowers, and to the geographical and economic segments. Such risks are monitored on a regular basis and subject to an annual or more frequent review, when considered necessary. Credit risk level limits for borrowers, groups of borrower, products, sectors and countries are approved by The Board of Directors on quarterly basis.

**National Bank of Egypt****Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

The credit limits for any borrower including banks is divided by sub-limits which includes the on and off-balance sheet amounts and the daily risk exposure limit regarding the trading items such as forward foreign exchange contracts. Actual amounts against limits are monitored daily. Exposure to credit risk is also managed through regular analysis of the existing and potential borrowers' ability to settle their obligations and also through changing the lending limits, when appropriate.

**The following are some tools used by the bank to mitigate the credit risk****Collaterals**

The bank sets a various policies and regulations in order to mitigate its credit risk. One of these methods is accepting collaterals against granted money. The bank implements guidelines for a specified category of accepted collaterals. The major types of collateral for loans and advances are:

- Property mortgage
- Business assets mortgage such as machines and goods.
- Financial instruments mortgage such as debt and equity instruments.

Longer-term finance and lending to corporate and retail are often secured. To reduce credit loss to its minimum level, the bank intends to get additional collateral from the concerned parties as soon as an indication of impairment of loan or facility appears. Collateral held as a security against assets other than loans and facilities; determined by the nature of the instrument, and debt instruments and treasury bills are normally unsecured with the exception of asset-backed securities and the similar instruments backed by a financial instrument portfolio.

**Derivatives**

The bank maintains conservative control limits over net open derivatives positions, the difference between the purchase and sale contracts on both the value and term. At any time, the amount subject to credit risk is measured at the instrument's fair value which achieves benefit to the bank (i.e., assets that have positive fair value), which represent a small portion of the notional value or the notional values used to express the volume of the outstanding instruments. This credit risk is managed as a part of the overall lending limits granted to customers' together with expected risk exposure arising from market changes. Generally, no collateral obtained for credit risk related to these instruments, except for marginal deposits required by the bank from other parties.

Settlement risk arises when cash, equity instruments or other financial papers is used in the settlement process, or if there is expectation to receive cash, equity instruments or other financial papers. Daily settlement limits are established for each other party in order to cover the aggregated settlement risk arising from the daily Bank transactions.

**Master Netting Arrangements:**

The Bank further restricts its exposure to credit risks by entering into master netting arrangements with parties representing significant volume of transactions. Master netting arrangement do not generally result in netting between assets and liabilities at the balance sheet date as the settlement is a collectively based. However, the credit risk regarding the bank's favorable contracts is reduced by a master netting arrangement as if there is a default, all amounts with other parties using the master netting arrangement is terminated and settled. The value of the credit risk exposure arising from derivatives instrument subject to master netting agreement is changed in short term as it is affected by each transaction subject to this agreement.

**Credit-related Commitments:**

The primary purpose of credit-related commitments is to ensure that funds are available to customer when required. Guarantees and standby letters of credit carry the same credit risks as loans. Documentary and commercial letters of credit – which are issued by the Bank on behalf of its customer by which a third party grants the right to draw within a stipulated limit subjected to a specific terms and conditions that are collateralized by the goods under shipment. Therefore, a lower risk than a direct loan is carried.

Credit-related commitments represent the unused portion of the authorized granting for credit limit of loans, collaterals or letters of credit. With respect to credit risk arising from credit-related commitments, the Bank is exposed to a probable loss of an amount equal to the total unused commitment. However, the expected weighted amount of loss is less than the unused commitments, as the most of credit-related commitments are contingent liabilities for customers with specific credit criteria. The Bank monitors the maturity term of the credit-related commitments because the longer-term commitments generally have a greater degree of credit risk than the shorter-term commitments.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**4.1.3-Expected credit losses policy**

The Bank's policies require the identification of three stages of classifying financial assets measured at amortized cost, loan commitments and financial guarantees as well as debt instruments at fair value through other comprehensive income in accordance with changes in credit quality since initial recognition and thereafter measuring the impairment losses (expected credit losses) as follows:-

The un-impaired financial asset is classified at initial recognition in the first stage and credit risk is monitored continuously by the Bank's credit risk management.

In the case of a significant increase in credit risk since the initial recognition, the financial asset is transferred to the second stage and the financial asset is not considered at this stage (the expected credit loss over the life of the asset without impairment).

In case of indications of impairment of the financial asset, it is transferred to the third stage. The Bank relies on the following indicators to determine whether there is objective evidence of impairment:

- A significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant negative changes in the activity and financial or economic conditions in which the borrower operates.
- Scheduling request as a result of difficulties facing the borrower.
- Significant negative changes in actual or expected operating results or cash flows.
- Future economic changes affecting the borrower's future cash flows.
- Early indicators of cash flow / liquidity problems such as delays in servicing creditors / business loans.
- Cancellation of a direct facility by the bank due to the high credit risk of the borrower.

The expected credit loss provision reported in the balance sheet at the end of the year is derived from the four internal rating grades. However, the majority of the impairment loss provision derived from the last two ratings.

Bank's rating	30-Jun 2020		30-Jun 2019	
	Loans and advances according to eligibility rating scale	ECL provision	Loans and advances according to eligibility rating	ECL provision
Performing loans	77.48%	20.50%	74.97%	13.50%
Regular watching	18.99%	36.32%	20.97%	35.70%
Watch list	2.17%	22.22%	2.45%	25.70%
Non-performing loans	1.36%	20.96%	1.61%	25.10%
	<b>100%</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>

The management is confident in its ability to continue of controlling and maintaining the minimum credit risk limit derived from loans, advances and debt instruments portfolio as follows:

the loans and advances' portfolio which classified at the highest two categories

30-Jun 2020	30-Jun 2019
96.5%	95.9%

**4.1.4-Pattern of measure banking general risk**

In addition to the four categories of credit rating indicated in note (A/1) the management makes more categories in shape of more detailed subgroups in accordance with the CBE requirements, Assets exposed to credit risk in these categories are classified according to detailed conditions and terms depending on customer's information about, his activities, financial position and his regularity of making payment.

The Bank calculates the provisions required for impairment of assets exposed to credit risk, including credit-related commitments on the basis of determined rates by CBE. In case, the provision required for impairment losses as per CBE regulations exceeds the provision required for financial statements preparation purposes, this increase shall be reduced from "the retained earnings" caption and carried forward to the "general Banking risk reserve" caption in equity. This reserve is amended in a regular basis by increasing or decreasing, as it always shall be equivalent to the amount of increase between the two provisions. This reserve is not available for distribution. The following are categories of institution worthiness according to internal ratings compared to CBE ratings and rates of required provision for impairment of assets exposed to credit risk:

CBE rating	Rating description	Provision%	Internal rating	Rating description
1	Low risks	0%	Performing loans	1
2	Moderate risks	1%	Performing loans	1
3	Satisfactory risks	1%	Performing loans	1
4	Appropriate risks	2%	Performing loans	1
5	Acceptable risk	2%	Performing loans	1
6	Marginally acceptable risks	3%	Regular watch-list	2
7	Watch-list	5%	Special watch-list	3
8	Substandard	20%	Non performing loans	4
9	Doubtful	50%	Non performing loans	4
10	Bad	100%	Non performing loans	4

## National Bank of Egypt

## Notes to the separate financial statements for the year ended 30 Jun 2020

All figures are in EGP Millions

**4.2- Market risks**

The Bank is exposed to market risks embodied in the fair value fluctuations or the future cash flows arising from the changes in market rates. Market risks are derived from the open positions of interest rate, currency rates and the equity products, as each of them is exposed to a general and special market movements as well as to changes in the sensitivity level of market rates or prices such as interest rates, exchange rates and equity instrument rates. The Bank separates its exposure to market risk, either for trading or non-trading portfolios.

The management of market risks arising from trading or non-trading activities is centralized in the Bank's Market Risk management department which is monitored by two separate teams. Periodical reports on market risks are submitted to the Board of Directors and the heads of business unit on a regular basis.

Trading portfolios include position derived from the Bank's direct dealing with customers or market, while non-trading portfolios are primarily derived from interest rate management of assets and liabilities related to retail transactions. These portfolios include foreign currency risks and equity instruments arising from investments at amortized cost and fair value through other comprehensive income investments<sup>1</sup>.

**4.2.1-Market risk measurement techniques**

As part of market risk management, the Bank performs several hedging strategies and enters into interest rate swaps in order to balance the inherent risks of debt instruments and fixed-rates long term loans, if the fair value option is applied. The following are the most important measurement methodologies applied to control the market risks.

**Value at Risk**

The Bank applies "Value at Risk" methodology for trading and non-trading portfolios in order to estimate the market risks of the current positions and the maximum limit of expected loss, based on a number of assumptions for various changes in market conditions. The Board of Directors sets a limit for the value at risk that the Bank can tolerate for trading and non-trading separately. Such limits are daily monitored by the Bank's Market Risks Department.

Value at risk is a statistical prospect for the expected loss of the current portfolio arising from the market's adverse circumstances. It states the maximum value the Bank may lose using a specific confidence coefficient (99%). Consequently, the statistical probability of (1%) indicates that the actual loss may be greater than the expected value at risk.

The value at risk model assumes a defined retention period (one day) before closing the open positions. The model also assumes that the market's move will follow, during the retention period, the same pattern of movement that occurred during the previous day. The Bank estimates the previous movement on the basis of the information for the past five years.

The Bank applies such historical changes in the rates, prices and indicators to the current positions directly – this method known as the historical simulation. Actual outputs should also be monitored on a regular basis to measure the correctness of assumptions and the factors used to calculate the value at risk. Usage of this method does not prevent the losses to exceed these limits in case of larger movement within the market.

Since value at risk is considered a basic component of the Bank's monitoring system on market risk, the Board of Directors sets the limits of the value at risk for each of trading and non-trading transactions to be divided on the units of activity. The actual values at risk are compared with the limits set by the Bank and daily reviewed by the Bank's Market Risk Department.

The quality of the value at risk model is persistently monitored through reinforcement testing for results of the value at risk of trading portfolio. Results of these tests are reported to senior management and Board of Directors.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**Stress Testing**

Stress testing provide an indication of the potential size of losses that could arise under the severe adverse circumstances. Stress testing is designed to be appropriate to the business activities using standard analyses for specific scenarios.

Stress testing performed by the Bank's Market Risk Department includes testing for the stress of risk factors whereby a groups of severe movements are applied to each risk type and the developing market' stress is tested. Developing markets are subject to severe movements and special stress tests including potential events that affect specific positions or areas, such as the results from floating a currency in a specific region. The senior management and Board of Directors review stress testing outputs.

**Total value at risk according to risk type**

	30-Jun-2020			30-Jun-2019		
	Average	Higher	Lower	Average	Higher	Lower
Exchange rates risk	293	905	-	471	836	17
Interest rate risk	26,485	48,439	15,306	17,840	20,753	15,486
Interest rate risk for portfolios managed by others	-	1	-	-	1	-
Equity at fair value through profit / loss risk	5	9	2	3	5	1
Equity at fair value through other comprehensive income risk	115	319	37	51	69	38
Fair value risk for portfolios managed by others	6	14	2	5	8	1

**Value at risk for portfolios at fair value through profit / loss-according to the risk type**

	30-Jun-2020			30-Jun-2019		
	Average	Higher	Lower	Average	Higher	Lower
Exchange rates risk	293	905	-	471	836	17
Interest rate risk for portfolios managed by others	-	1	-	-	1	-
Equity at fair value through profit / loss risk	5	9	2	3	5	1
Fair value risk for portfolios managed by others	6	14	2	5	8	1

**Value at risk for portfolios at fair value through other comprehensive income-according to the risk type**

	30-Jun-2020			30-Jun-2019		
	Average	Higher	Lower	Average	Higher	Lower
Exchange rates risk	26,485	48,439	15,306	17,840	20,753	15,486
Equity at fair value through other comprehensive income risk	115	319	37	51	69	38

The increase in value at risk, especially the interest rate risk, is related to the increase in the sensitivity of interest rates in the international financial markets. The three previous results of value at risk are calculated separately from the specific positions and the markets' historical movements. Total values at risk for trading and non-trading do not form the Bank's value at risk, due to the correlation between the types of risks and types of portfolios and its subsequent various impacts.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**4.2.2-Foreign exchange rate volatility risk**

The Bank is exposed to volatility in the foreign currency exchange rates in terms of the bank's financial position and cash flows. The Board of Directors has set limits for foreign currencies based on the total value of each position at the end of the day and also during the day for the monitored on spot positions. The following table summarizes the bank's exposure to the risks of volatility in foreign exchange rates at the end of the year. This table includes the carrying value of the financial instruments categorized by its component currencies:

30-Jun-2020	EGP	USD*	EUR	GBP	SAR	Others	Total

**4.2.3-Interest rate risk**

The Bank is exposed to the effects of fluctuations in the levels of the prevailing market's interest rates which is the interest rate risk for cash flows represented in the volatility of future cash flows of a financial instrument due to changes in the instrument's interest rate. The interest rate risk for fair value is the risk of fluctuations in the instrument's value due to the changes in market's interest rates. The interest margin may increase due to these changes, while the profits may decrease, in case of unexpected movements occur. The Board of Directors sets limits for the level of difference when re-pricing the interest rate held by the bank; whereby monitored by Assets & Liabilities Department collaborated with Treasury Department on a daily basis.

The following table summarizes the Bank's exposure to the risk of fluctuations in interest rates including the carrying value of financial instruments distributed based on the price of re-pricing dates or maturity dates whichever is earlier.

All figures are in EGP Millions

**4.3- C- Liquidity risk**

The liquidity risk is the risk for which the bank is exposed to encounter difficulties in meeting its obligations associated with its financial liabilities at maturity date. and replacing the funds when withdrawn ; Consequently it may fail to meet obligation related to repay depositors and meet lending commitments .

**Liquidity risk management**

The Bank's liquidity risk control is carried out by the Bank's Assets and Liabilities Management Department collaborated with the Treasury Department and include the following :

- The daily funding is managed by monitoring the future expected cash flows in order ensure the ability of fulfilling all requirements. This includes replenishment of funds as they mature or as borrowed by customers. The Bank maintains access to the global capital markets to ensure that his objective is achieved.
- Maintaining a portfolio of highly marketable assets, which can easily be liquidated to meet any unexpected interruption in cash flows.
- Monitoring liquidity ratios compared to the internal requirements of the Bank and the Central Bank of Egypt's requirements.
- Managing of concentration and profile of loans maturities.

For monitoring and reporting purposes, the cash flows for the next day, week and month is measured and projected. These periods are the key periods for liquidity Department. The starting point for these projections is represented in the analysis of the contractual maturities of financial liabilities and expected collection dates of financial assets.

Assets and Liabilities Management Department collaborated with the Treasury Department monitor the inconsistency of medium-term assets with the level and type of the unutilized portion of loan commitments, and also the extent of use of overdraft facilities with the effect of contingent liabilities such as letters of guarantees and documentary credits.

**Financing approach**

Sources of liquidity are reviewed by a separate team in the Assets and Liabilities Management Department collaborated with the Treasury Department in order to provide a wide diversification within currencies, geographical regions, resources, products, and maturates .

**Cash flows hedge**

The value at risk model is continuously monitored for quality through confirmed tests for the value at risk results related to the trading portfolio. The results of those tests are reported to bank's senior management and the board of directors.

**Derivatives settled on a net basis**

The Bank's derivatives settled on net basis include:

- Foreign exchange derivatives: currency option in/over the counter, and forward currency contracts
- Interest rate derivatives: foreign currency swaps, cross currency contracts, Interest-rate swap, in/over the counter, forward contracts and other contracts.

**Derivatives settled with gross**

Derivatives settled with gross include:

- Foreign exchange derivatives: Cross currency contracts, foreign currency swap.
- Interest rate swap, interest rate and foreign currency swap contracts together.

## National Bank of Egypt

## Notes to the separate financial statements for the year ended 30 Jun 2020

All figures are in EGP Millions

4.4- Fair value of assets and financial liabilities4.4.1-Financial instruments measured at fair valueDue from banks

The fair value of overnight deposits designated at floating interest rate is represented in its nominal value. The expected fair value of the deposits designated a floating interest rate is measured based on the discounted cash flows by using the prevailing capital market's nominal value of debts with similar credit risk and similar maturity date.

Loans & advances to banks

Loans & advances to banks are represented in loans other than deposits with banks. The expected fair value of Loans & advances is measured at the discounted value of future cash flows expected to be collected. Cash flows are discounted using the current market rate in order to determine the fair value.

Loans & advances to customers

Loans & advances are stated in net terms after deducting the impairment loss provision. The expected fair value of Loans & advances is represented in the discounted value of future cash flows expected to be collected. Cash flows are discounted using the current market rate in order to determine the fair value

Investment in securities

Listed financial investment are classified either through fair value through other comprehensive income or through fair value through profit / loss. Fair values are determined based on quoted market prices in active markets, If such data were not available then the fair value is measured using the prevailing capital market's prices for marketable securities with similar credit features, maturity dates as well as similar rates.

Due to other banks and customers

The estimated fair value of deposits with unspecified maturity date, which includes non- interest bearing deposits, is represented in the amount to be paid on demand. The fair value of fixed interest-bearing deposits and the other loans that are not quoted in an active market are determined based on the discounted cash flows by applying interest rates for new debts with a similar maturity dates.

Issued debt instruments

Total fair value is calculated based on current capital markets' rates. As for securities that have no active market, it is calculated based on the discounted cash flows model using the current interest rate according to the remaining maturity.

Mutual fund certificate

Mutual funds certificates which are valued by the redemption value (fair value).

4.4.2-Financial instruments not measured at fair value:Financial instrument at amortized cost

The financial investment includes bonds that are held to maturity, quoted and measured with amortized cost.

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**4.5- Capital management**

The bank's objectives for capital management, which include other elements along with the reported equity in the balance sheet, are represented in the following:

- Complying with the capital's legal requirements at Arab Republic of Egypt and at other countries where the bank's branches operate.
- Maintaining a strong capital base to enhance growth of the bank's operations.

Capital adequacy and capital uses are reviewed according to the requirements of regulatory authorities (Central Bank of Egypt) and by the bank's management using models based on the guidelines of Basel Committee for Banking Supervision. The required information is submitted to the Central Bank of Egypt on a quarterly basis.

**The Central Bank of Egypt requires the following:**

- Maintain the sum of EGP 500 Million as a minimum limit for issued and paid-up capital.
- Maintain a percentage equal to 10% or more as a ratio between capital elements and the risk-weighted assets and liabilities.
- Overseas branches are subject to the banking supervision rules of the countries in which they operate

**The numerator of the capital adequacy ratio consists of:**
**\* Tier one after exclusions includes the following:-**

- Share capital after exclusion (Common Equity-CET1)
- Additional going concern share capital

As well as, items that are deducted from the share capital if its value is negative, otherwise (positive value) are neglected in conformity with regulators' instructions regarding the minimum of capital adequacy ratio.

**\* Tier two after exclusions includes:-**

45% of special reserve, subordinate loans (deposits) within the set percentage and the expected credit losses provision formed against debt instruments, loans and advances ,contingent liabilities, which included at (stage 1).

**Capital adequacy ratio includes significant notes and points as follows:-**

- 1- Reserves: which include legal, general, statutory, supportive, and capital reserves only.
  - 2- General risk reserve is formed at the initial implementation of IFRS 9 according to CBE regulation on February 26, 2019 which includes, special reserve-credit, general banking reserve-credit and IFRS 9 risk reserve. Considering when calculating the capital adequacy ratio in the subsequent periods, the bank should follow the minimum capital adequacy ratio instructions and excluding the general risk reserve in the ratio.
  - 3- Balances of other comprehensive income items' are included whether positive / negative .
  - 4- Periods profits /(losses): profits is permitted to include in the capital base, after issuing the bank's limited review audit report on a quarterly basis. However, the losses are unconditionally included.
  - 5- The credit-part is not included in conformity with CBE regulation on April 2009, page (7), section (9).
  - 6- The base should not exceed 1.25% of the total credit risk -weighted assets and contingent liabilities, with condition that expected credit losses provisions' for debts, loans, credit facilities and contingent liabilities included at stage 1 and 2 to be sufficient to meet its obligations .
  - 7- The limit over due of the predetermined placement in the risk-weighted countries:  
Should included this amount in according of model number 720, which related to the overseas placement in , considering the capital base, which previously determined in the said statement above.
- \* The constant share capital after regulatory amendments mean is , the item 1.1 before deducting financial investments companies' (Shares or Mutual fund certificates ) which represent in item (1.1.3.1).
  - \* The Share capital before regulatory amendments includes paid up capital, reserves, retained earnings, general risk reserve and other comprehensive income items' after excluding goodwill and treasury shares.
  - \* Subordinate loans (deposits):on condition that not exceed 50% from Tier one after exclusions, with annual amortization 20% over the last 5 years of maturity.

**National I National Bank of Egypt**

**National Bank of Egypt**
**Notes to the separate financial statements for the year ended 30 Jun 2020**

All figures are in EGP Millions

**13-Income tax expenses**

Taxes on treasury bills , bonds and cash dividends  
The amount paid from the above tax

30-Jun 2020	30-Jun 2019
(17,535)	(13,479)
16,076	11,036

Taxes on the bank's profits vary from the amount derived from applying the current tax rates as follows:

	30-Jun 2020	30-Jun 2019
Profit before tax	30,602	33,684
Effective tax rate (22.5%)	6,885	7,579
Non- taxable income	(15,644)	(3,229)
Non- deductible expenses	12,117	5,166
<b>Income tax expenses</b>	<b>3,358</b>	<b>9,516</b>
Effective tax rate (excluding taxes on treasury bills, bonds and cash dividends )	10.97%	28.25%
Effective tax rate (including taxes on treasury bills, bonds and cash dividends )*	57.30%	40.02%

\*Effective tax rate includes taxes on treasury bills, bonds and cash dividends proportioned to the profit before tax.

The difference between the tax charged to income statement (profit / loss) and the tax presented in cash flows statement is the unrealized revenue tax at reporting date

**Not recognized deferred tax assets**

	30-Jun 2020
Impairment loss provision for loans (excluding 80% of the amount charged during the year)	395

Deferred tax assets are de-recognized due to the lack of reasonable assurance that this account can be utilized/ or a proper conformity level that there are a future taxable profits enough to settle these assets.

**14-Basic earnings per share/ Diluted**

Earnings per share is calculated by dividing the bank's shareholders net profit over the weighted average of common shares issued during the year, after excluding the weighted average of treasury shares repurchased by the bank.

	30-Jun 2020	30-Jun 2019
Net profit for the year	13,067	20,205
Employees` profit share for the year*	(4,173)	(3,027)
Net profit available for distribution to shareholders (1)	<b>8,894</b>	<b>17,178</b>
The weighted average of the issued common shares (2)**	<b>50,000</b>	<b>50,000</b>
<b>Basic earnings per share/ Diluted</b>		
EGP	<b>0.18</b>	<b>0.34</b>

\*According to the bank's article of association amendment para (27).

\*\*The comparative figures are amended to conform with the Egyptian Accounting standard (22), as this increase is a non-cash increase, transferred from the bank's reserve.

**38-Significant events**

The coronavirus ("COVID-19") pandemic is continuing across the various geographies globally, causing disruption to business and economic activities. COVID-19 has brought about uncertainties in the global economic environment. NBE is closely monitoring the situation through the business continuity planning and other risk management practices to manage the business disruption caused by COVID-19 outbreak on its operations and financial performance. Based on the uncertainties caused by COVID-19 and following the actions taken by the state regarding the co-existence procedures, NBE is closely following up the loan portfolio considering the relevant impact of COVID-19 on the qualitative and quantitative factors where determining the significant increase in Credit Risk is specifically done for the whole portfolio with its different economic sectors. Accordingly, NBE is continuing its internal protective action which started in the last quarter of the financial year ended 30-June- 2020 by enhancing the level of provisions as a mitigation plan for the COVID-19 impact on the loan portfolio. Further precautionary actions might be taken progressively in the light of the pandemic is not over yet.
